

APSSDC DJANGO INTERNSHIP

TITLE :- Shopping Application

Abstract :

An application, through which a **registered customer** can place the order for a product, out of all the products available. The **Owner**, who can grant access to whichever the role is, and can view the products available. A **Product Manager**, can add/update or delete the products/items primitively.

We will be using a database, which contains details of the users and their roles, different products and their respective variants of different sizes.
